COMMENTS TO AUTHORS

Dear Sirs I like your manuscript. It is well written, easy to read, well structured and nice topic Minor changes: 1. I think that you do not find more papers but inclding EMBASE and Cochrane is usual in PRISMA studies 2. You have to write the search you done: MESH and words 3. You have to define what is a case for you: patients that received a LT and has been count platelet and measures survival (very well defined) With these small changes I think that you will improve manuscript

COMMENTS TO AUTHORS

I read the manuscript. Lai et al. performed a systematic review and meta-analysis on platelet-to-lymphocyte ratio (PLR) as a risk factor for post-transplant hepatocellular cancer (HCC) recurrence. The study was well designed and well written.

COMMENTS TO AUTHORS

This study can be used for liver transplant receptor selection with a small cost. It is valuable.
