transplantation. The content of this review is very complete and updated. Even so, authors could add some recent papers about treatment of de novo TMA with Eculizumab (i.e. Shochet et al., 2017 and Safa et al., 2015), since they compare with recurrent aHUS after transplantation. The main comment to improve the clarity of this review is to improve the use of the abbreviations by: 1) Checking whether the first time they are used within the text is the first time they are explained 2) Making sure they do not use different abbreviations for the same concept (i.e. Factor H is abbreviated as CFH and FH, alternatively along the text) 3) Confirming every abbreviation is mentioned at least once within the main body (i.e. ESRF, GIT, LM, IF, EM...) It would help if every abbreviation is listed in the "Abbreviations" section.
