Validation of the VitalPAC Early Warning Score at the Intermediate Care Unit

Joost DJ Plate, Linda M Peelen, Luke PH Leenen, Falco Hietbrink

Abstract

Background: Early Warning Scoring (EWS) systems to recognize the clinical deteriorating patient are widely used, also in Intermediate Care Units (IMCUs). However, they have been developed and validated for the general hospital ward population and hence their applicability within the IMCU population is unclear. This validation study aims to assess the performance and clinical relevance of the EWS at the IMCU.
