COMMENTS TO AUTHORS

This review summarizes the recent approaches in managing IBD patients, including telemedicine and a treating-to-target structure. Overall it presents a fine summary of the current literature in the field of IBD management. Comments: 1. There are several typo and grammar errors in the manuscript. 2. In the study conducted by Pena-Sanchez et al (page 9 under the title of evidence surrounding QI Application), the compared groups should be clearly mentioned in the conclusion.

COMMENTS TO AUTHORS

It is a well written paper summarizing current opportunities to optimize quality of care in IBD patients. In a comprehensive way the authors describe quality indicators, treating to target, benefits of tighter patients' control, rapid access clinic as well new means like telemedicine in improving IBD patients' care. My only doubt is weather a different title (for instance "Quality of care in inflammatory bowel diseases: what is the best way to better outcomes?") would not be more suitable as a tight control is only a part of all considerations.

COMMENTS TO AUTHORS

The authors of the paper " Quality of care in inflammatory bowel diseases: is tight control the way to better outcomes?" present the complex nature of diagnosis and treatment of IBD, the impact of the course of the disease on the quality of life of the patient and the economic burden on care for the patient. The authors present the results of interim work in which various methods were evaluated to assess the quality of care for patients with IBD - which are important in improving the quality of treatment and the life of an IBD patient. In addition, the problem of proper pharmacotherapy is addressed, aimed not only at the clinical improvement of the patient but rather the cure of the intestinal mucosa " treating-to-target structure " . Cure of the intestinal mucosa guarantees prolonged remission of the disease and improvement of the patient's quality of life. In my opinion, the manuscript is correctly written and can be published.
