Ambiguous roles of innate lymphoid cells in chronic development of liver diseases

Shen Y *et al.* ILCs and chronic liver diseases

Yue Shen, Jing Li, Si-Qi Wang, Wei Jiang

Abstract

Innate lymphoid cells (ILCs) are defined as a distinct arm of innate immunity. According to their profile of secreted cytokines and lineage-specific transcriptional factors, ILCs can be categorized into the following three groups: group 1 ILCs (including natural killer (NK) cells and ILC1s) are dependent on T-bet and can produce interferon- γ ; group 2 ILCs (ILC2s) are dependent on
