Study Design

Study Type	Interventional Study	Study Purpose	Supportive Care	Phase	해당사항없음(Not applicable)
Intervention Model	Parallel	Blinding/ Masking	Open	Allocation	RCT
Intervention Type	Behavioral	Number of Arms	2		
Intervention Description	exercise group : 3 times * 90minute, During12-week, aerobicexercise and resistance exercise. control group : maintain routine activities of day living.				

Arm 1	Arm Label	exercise group	Target Number of Participant	100	Arm Type	Experimental
	Arm Description	3 times * 90minute, During12-week, aerobicexercise and resistance exercise.				
Arm 2	Arm Label	control group	Target Number of Participant	100	Arm Type	No intervention
	Arm Description	maintain routine activities of day living.				

Subject Eligibility

Condition(s) / Problem(s)	* Mental and behavioral disorders Depressive Symptoms			Rare Disease	No
Gender	Both	Age	20(Year) ~ 60(Year)	Healthy Volunteers	Yes
Inclusion Criteria	Patients were offered enrollment if they had not participated in any structured exercise program in the past 12 months and had no physical limitations impeding normal activity.				
Exclusion Criteria	Patients were denied enrollment according to diagnosis of cardiovascular or orthopedic diseases with potential effects on CTT, diagnosis of functional stomach diseases, undergoing treatment with				

Outcome Measure(s)

Type of Primary Outcome	Not applicable				
Primary Outcome 1	Outcome	colon trasit time	Timepoint	pre-post	
Secondary Outcome 1	Outcome	fitness test	Timepoint	pre-post	
Secondary Outcome 2	Outcome	physical activity amount	Timepoint	pre-post	
Secondary Outcome 3	Outcome	depression system	Timepoint	pre-post
