Characteristics and predictors of gastric cancer after *Helicobacter pylori* eradication

Shichijo S *et al.* Gastric cancer after *H. pylori* eradication

Satoki Shichijo, Yoshihiro Hirata

Abstract

Helicobacter pylori (*H. pylori*) eradication can reduce gastric cancer. However, gastric cancer still develops after eradication, and cases who received eradication therapy are increasing. In this study, we have reviewed the characteristics and predictors of primary gastric cancer developing after *H. pylori* eradication. In terms of the characteristics, endoscopic, histologic, and molecular characteristics are reported.
