### Abstract

Hepatitis B virus (HBV) is still a worldwide health concern. While divergent factors are involved in its pathogenesis, it is now clear that HBV RNAs, principally templates for viral proteins and viral DNAs, have diverse biological functions involved in HBV pathogenesis. These functions include viral

Currently, very little is known regarding the exact mechanism and factors that may be involved in cccDNA formation. The fact that the conversion of HBV rcDNA to cccDNA is less efficient in hepatoma cell lines than in infected livers [23] and the observation that the duck hepatitis B virus (DHBV) rcDNA converted more ...
