

COMMENTS TO AUTHORS:

The manuscript presented by Shiva Safari et al. is a very good review that brings to attention new treatment modalities for a number of orthodontic disorders. These treatments are based on the use of mesenchymal stem cells seeded in scaffolds, MSC that can be easily isolated from the dental pulp. The manuscript is particularly interesting, very well organized and easy to follow. I especially appreciate the two figures that illustrate very well the potential uses of SC in the field dentofacial orthopaedics and orthodontics. The language is perfectly correct and the content is understandable. I support publication of the presented article.

AUTHORS RESPONSE:

The authors would like to express their sincere gratitude to the anonymous referee for his/her careful reading of our manuscript and kind interest in the manuscript.
