The Editor,  
World Journal of Psychiatry  
Dear Sir,

### **Response to reviewers**

We are grateful for the comments and contributions of the reviewers. All changes required of us have been implemented and highlighted in red. We are also grateful to the reviewers for the suggested articles; they were of immense benefit in improving the quality of this manuscript.

#### **Reviewer 1**

1. The English version of the paper must be revised: The manuscript has been edited for language and grammar and corrections made where necessary
2. It would be important to emphasize that the use of melatonin in the treatment of this type of diseases, but also others, is very interesting from an economic point of view, since it is a natural compound not held under patent. This has been done.

#### **Reviewer 2**

The suggested articles were very useful in improving some sections of the manuscript  
Once again thanks for your kind comments and contributions.

Best regards
