

## Point-to-point answer

<b>Reviewer 1</b>	
1) It would be very helpful to draw step by step diagrams, so readers may understand the process better.	We think a video would be more helpful and practical than many figures describing the technique. A video was therefore taken during the procedure and is attached as a supplemental video to this submission.
2) By any change, do you have video which was taped during the implantation.	
3) Please label the figures with the names of key structures. It will help understand the prosthesis.	Thank you for the comment. We labeled the figure as required by the reviewer. New figure legends with corresponding to the labels are provided in the revised manuscript.
4) The author please provide the experiences of 120 cases RE: successful rate, on pump time, complications?	Up till now, we have operated upon over 100 patients using this technique. However, we are currently at the stage of data processing of just over 60 patients and data collection for the rest. Thus we would not be able to supply these data currently on a statistical basis. Nevertheless, we noted no incidence of paravalvular leaks as well as an essential decrease in cross-clamp and cardiopulmonary bypass times.
