Circadian dysrhythmia-linked diabetes mellitus: examining melatonin's roles in prophylaxis and management

Adejoke Y Onaolapo , Olakunke J Onaolapo

Abstract

Diabetes mellitus is a chronic, life-threatening metabolic disorder that occurs worldwide. Despite an increase in the knowledge of the risk factors that are associated with diabetes mellitus, its worldwide prevalence has continued to rise; thus, necessitating more research into its aetiology. Recent researches are beginning to link a dysregulation of the circadian rhythm to impairment of intermediary
