SPECIFIC COMMENTS TO AUTHORS

In the interesting case report the case of fulminant infestation with *Schistosoma japonicum* is described. Diagnostic and therapy are addressed. Comments 1. The authors should illustrate the morphological finding of *Schistosoma japonicum*. In the ELISA the species *Schistosoma*, but not *japonicum* is identified.

SPECIFIC COMMENTS TO AUTHORS

This is a unique case report of duodenal schistosomiasis. The detailed case presentation will satisfy readers. On the other hand, the discussion is superficial. Endoscopic diagnosis is a special point that should be emphasized in this case report. I recommend the authors quote the below paper to deepen the discussion. Mohamed AE, et al.

SPECIFIC COMMENTS TO AUTHORS

The case report written by Zhuanglong Xiao et al. describes an interesting case of Schistosoma japonicum infection with a rare presentation. The case report is an important one, but there is a concern that needs to be addressed. Minor point. The patient showed heterogeneity in hepatic perfusion and ascites, suggesting that

Schistosoma japonicum eggs are massively deposited in portal branches of the liver leading to portal hypertension. The authors should add such discussion.
