

Science Editor  
World Journal of Gastrointestinal Endoscopy  
**Fang-Fang Li**

Badalona, July 11<sup>th</sup>, 2018.

Dear Dr. Li

I would like to thank comments from the reviewers, which have improved the quality of our manuscript (No. 39790). Also I would like to thank you for the opportunity to submit a revision of our Editorial.

Following your instructions I answer reviewer comments:

- 1) Conclusion is more conservative. We have remarked in the discussion that with this small number of patients we need larger studies to validate these findings and to perform a comparison study with other lifting solutions
- 2) The cost-effectiveness of this method has been explained in the discussion.
- 3) EMR terminology as abbreviation has been explained
- 4) Lesions less than 4cm, one kit per patient is enough. This means around 8ml of PRP per patient
- 5) PRP does not prolong EMR time

Sincerely yours,

Vicente Lorenzo-Zúñiga , M.D., Ph.D.
