Encapsulating peritoneal sclerosis

Danford C *et al.* Encapsulating peritoneal sclerosis

Christopher J Danford, Steven C Lin, Martin P Smith, Jacqueline L Wolf

Abstract

Encapsulating peritoneal sclerosis (EPS) is a debilitating condition characterized by a fibrocollagenous membrane encasing the small intestine, resulting in recurrent small bowel obstructions. EPS is most commonly associated with long-term peritoneal dialysis, though medications, peritoneal infection, and systemic inflammatory disorders have been implicated. Many cases remain idiopathic. Diagnosis is often delayed given the rarity of the disorder combined with non-specific symptoms and laboratory
