

**Neurofibromatosis type 1-associated multiple rectal neuroendocrine tumors:  
A case report and review of literature**

Xie R *et al.* NF-1 with multiple rectal neuroendocrine tumors

Rui Xie, Kuang-I Fu, Shao-Min Chen, Bi-Guang Tuo, Hui-Chao Wu

**Abstract**

Neurofibromatosis type 1 (NF-1) is commonly associated with benign or malignant tumors in both the central and peripheral nervous systems. However, rare cases for NF-1-associated multiple rectal neuroendocrine tumors have been reported. This report describes a case of a 39-year-old female with NF-1 and intermittent hematochezia as a primary symptom. Physical examination showed multiple subcutaneous nodules and café au lait spots with obvious scoliosis on the back. Imaging examinations and
