

**We thank the editor and the reviewers for the constructive comments that have certainly contributed to improve the manuscript.**

**All the comments have been addressed and the changes are highlighted in the manuscript.**

1. Authors have nicely reviewed the management of bacterial and fungal Infections in pre and post-Liver transplant patients.
2. Early suspicion of infection/sepsis, its diagnosis and empirical treatment in patients with liver cirrhosis or liver transplant recipient is very important for the survival of patients. Author could have discussed in more detail about the approach for diagnosis and empirical treatment of infections in liver cirrhosis and liver transplant patients.

**Thank you for this important comment. I have discussed the diagnostic and therapeutic approaches in more detail throughout the text. Furthermore, I have added a section on diagnosis and therapy of infections in liver cirrhosis and included a new table, Table 4, discussing the principles of therapy for MDRO in LT.**

3. Legends of Table-1 and Figure 2 can be revised.

**The legends have been revised as suggested**

4. Table-3 appears little busy.

**I agree and I would like to thank the reviewer for this suggestion. Table 3 has been revised and simplified in order to be easier to read**

5. Too many abbreviations are confusing

**The number of abbreviations has been limited as recommended**
