Treat-to-target in Crohn's disease: Will transmural healing become a therapeutic endpoint?

Serban DE *et al.* Transmural healing: Crohn's disease therapeutic endpoint

Abstract

⁶ Crohn's disease (CD) represents a chronic transmural inflammatory condition of the gastrointestinal tract, which usually leads to structural damage and significant disability. Deep remission - defined by both clinical and endoscopic remission, significant mucosal healing - represents the current endpoint in the treat-to-target
