author practiced hysteroscopic resection of lesions in one patient for the successful treatment. Intrauterine cystic adenomyosis is a special type of adenomyosis, which is a cystic structure lining the endometrium and covered with the uterine smooth muscle, containing old blood cyst fluid, also known as cystic adenomyoma or adenomyotic cyst. Intrauterine cystic adenomyosis can influence women's health quality and reproduction. Its clinical manifestation is similar to that of typical uterine adenomyosis, mainly presenting as severe dysmenorrhea, menorrhagia, and chronic pelvic pain. The cases in this report are typical. This report can guide gynecologists in similar clinical cases. Description of the cases are in very detail and English is good. Reviewer suggest accept for publication.
