**Hip hemi-arthroplasty for neck of femur fracture: What is the current evidence?**

Greg AJ Robertson, Alexander M Wood

### Abstract

This editorial reviews and summarises the current evidence (meta-analyses and Cochrane reviews) relating to the use of hip hemi-arthroplasty for neck of femur fractures. Regarding the optimal surgical approach, two recent meta-analyses have found that posterior approaches are associated with: higher rates of dislocation compared to lateral and anterior approaches; and higher rates of re-operation
