

**Name of Journal: World Journal of Hepatology**

**Manuscript NO: 40831**

**Manuscript Type: Meta-Analysis**

**Dobutamine-stress echocardiography and myocardial perfusion scintigraphy as predictors for coronary artery disease in liver transplantation candidates. A systematic review and meta-analysis**

Jonathan Soldera, Fábio Camazzola, Santiago Rodríguez, Ajacio Brandão

Dear Editor,

We have addressed every commentary marked in the reviewed file. The biostatistics form, MOOSE checklist, conflict-of-interest and audio core tip have been attached at submission.

We would just like to call attention to the title. A new shorter version is available in the reviewed file. We do not believe it is the better version of the title, though. We would like to suggest an exception which would allow the paper to keep its original title.

Best Regards,
