

PEER-REVIEW REPORT

Name of journal: World Journal of Gastrointestinal Oncology

Manuscript NO: 40946

Title: Gut-associated lymphoid tissue or so-called “dome” carcinoma of the colon:
Review

Reviewer's code: 03478911

Reviewer's country: South Korea

Science editor: Fang-Fang Ji

Date sent for review: 2018-07-27

Date reviewed: 2018-07-30

Review time: 2 Days

SPECIFIC COMMENTS TO AUTHORS

It is systematically well-organized review article following diagnosis, genetic features, and prognosis of GALT/dome-type carcinomas. This reviewer only raises one suggestion that it would be better to add one section that introduces the currently

SPECIFIC COMMENTS TO AUTHORS

The authors perform a review of gut-associated lymphoid tissue (GALT) or so-called “Dome” carcinoma of the colon in order to present a comprehensive review of this entity. The literature analyzed and presented is similar to some reviews published recent years

including the etiology, clinical features, macroscopic and pathological findings, and clinical significance about GALT or “Dome” carcinoma of the colon, but lacks any biological mechanism component (immunohistochemical analysis ,intracellular signaling mechanisms) that would present a deeper understanding of the problem. Manuscript would be strengthened by expanding in this area. 1- Most of your literature reported and analyzed is focused on pathological rather than clinical information (e.g.clinical features and diagnosis, latest advances in treatment.) This would seem essential to give clinical insight. 2- I find that the researches of the disease focus on etiology, macroscopic and pathological findings, the basis researches are less. Could you search and appraise some information in the fields of investigating the best immunohistochemical diagnosiscombination markers of GALT or the regulation mechanism on cellular molecular level. 3- It would be better if related pathological characteristics of the literature can be added in Table 1. 4- The provenance of figures are unclear. This needs to be added to results and figures. In addition, it proposed insertion and dyeing method of the picture should be label the magnification. 5-The references are best to be published in recent 3-5 years.
