Ductopenia and cirrhosis in a 32-year-old woman with progressive familial intrahepatic cholestasis type 3: A case report and review of the literature

You-Wen Tan, Hai-Lei Ji, Zhong-Hua Lu, Guo-Hong Ge, Li Sun, Xin-Bei Zhou, Jian-Hui Sheng, Yu-Hua Gong

Abstract

Progressive familial intrahepatic cholestasis type 3 is caused by a mutation in the ATP-binding cassette, subfamily B, member 4 (*ABCB4*) gene encoding multidrug resistance protein 3. A 32-year-old woman with a history of acute hepatitis at age 9 years was found to have jaundice during pregnancy in 2008, and was diagnosed as having intrahepatic cholestasis of pregnancy. In 2009,
