## Calcium and vitamin D in the serrated neoplastic pathway: Friends or foes?

García-Morales N *et al.* Calcium, vitamin D and serrated neoplasms

Natalia García-Morales, Carla Satorres, Marco Bustamante-Balén

### Abstract

Sessile serrated adenoma/polyps (known as SSA/Ps) may play an important role in the development of interval colorectal cancer (CRC). These lesions are more difficult to detect with conventional endoscopy and they may quickly turn into CRC, especially when dysplasia has developed. Therefore, primary or secondary chemoprevention may be an appealing strategy at a population level. Calcium and vitamin D have been shown in epidemiological studies to reduce
