SPECIFIC COMMENTS TO AUTHORS

A large retrospective study confirming the rise factors for worse prognosis of GIST. English needs some polishing; good hypotheses and a large number of patients to prove the concept.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting study, but with the limitations that it can't be applied in clinical.

The authors at the end of the conclusion seems that are not very clear the limitations of the study in comparison with the normal parameters used in GIST.

SPECIFIC COMMENTS TO AUTHORS

Comments 1. Is there any difference between conventional risk factor (tumor size and mitosis) and risk factors in this manuscript. I think it is needed to compare these new risk factors with conventional risk factors. 2. The risk factors in this manuscripts are
