Oligometastases in prostate cancer: Ablative treatment

Amalia Palacios-Eito, Amelia Béjar-Luque, Milagrosa Rodríguez-Liñán, Sonia García-Cabezas

Abstract

Technological advances in radiotherapy have led to the introduction of techniques such as Stereotactic Body Radiation Therapy (SBRT), allowing the administration of ablative doses. The hypothesis that oligometastatic disease may be cured through local eradication therapies has led to the increasing use of SBRT in patients with this type of disease. At the same time, scientific advances are being made to allow the confirmation of clinically suspected oligometastatic status at molecular level.

There is growing interest in identifying patients with oligometastatic prostate cancer (PCa) who may
