SPECIFIC COMMENTS TO AUTHORS

In the current case report, authors reported the diagnosis and surgery therapy of a patient with small bowel cavernous hemangioma, and systematically reviewed the related studies of intestinal hemangiomas published after 2000, and found that capsule

SPECIFIC COMMENTS TO AUTHORS

The article is devoted to a rather rare pathology of the small intestinal hemangioma, which, however, is dangerous for its complications. Possibilities of preoperative diagnostics of this pathology have until recently been limited, however, with the

development of endoscopic technology, this became possible. Therefore, this case report is devoted to the actual problem. It is not clear from the article whether during the BAE a biopsy and morphological verification of pathology at the preoperative stage were performed? Or maby a laparoscopic resection of the small intestine conducted without verifying the diagnosis? After all, such an endoscopic picture may have other tumors of the small intestine (for example GIST or NET) and surgical strategy could be different. Congratulations to the authors with a successful clinical case. In general, after making corrections, an article under the heading "Case report" can be published.
