

Thank you all for your positive comments.

We've made the revisions suggested by the editor.

We've also followed the advice of reviewer n. 3 (03537672).

We have left section IV in place because the issue of the timing for LT in ACLF patients is crucial for clinicians who take care of these patients.

We have made a much shorter conclusion and transformed the previous conclusion in a new section entitled "Practical proposals and future perspectives".
