Current strategies for malignant pedunculated colorectal polyps

Adriana Ciocalteu, Dan Ionut Gheonea, Adrian Saftoiu, Liliana Streba, Nicoleta Alice Dragoescu, Tiberiu Stefanita Tenea-Cojan

Abstract

Despite significant advances in imaging techniques, the incidence of colorectal cancer has been increasing in recent years, with many cases still being diagnosed in advanced stages. Early detection and accurate staging remain the main factors that lead to a decrease in the cost and invasiveness of the curative techniques, significantly improving the outcome. However, the diagnosis of pedunculated early colorectal malignancy remains a current challenge. Data on the management of pedunculated cancer precursors, apart from data on nonpolypoid lesions, are still limited. An adequate technique for complete
