

Dear Editor,

the manuscript was modified following the comments of the reviewers

I hope that, after the corrections, the manuscript can be accepted for publication in your journal.

**Reviewer #1**

1. We'll provide to improve language
2. A box enumerating the indications of pancreatoscopy is added
- 3- 4-5. Manuscript modified according with the suggested proposals

**Reviewer #2**

- Analysis for malignancy consist in cytologic diagnosis of the pancreatic juice. Cytologic criteria and the degree of cell differentiation as follows: benign (tall columnar cell sarranged in cohesive folds with mucinous hypertrophy in the apical region, and small and uniform nuclei), atypical (an increased nuclear-to-cytoplasmic ratio, nuclear hyperplasia, nuclear crowding, and stratification), and malignant (irregular projections, prominent anisonucleosis, large nuclei, nuclear irregularities, and loss of polarity, with or without neoplastic infiltrating glands)
- Manuscript modified according with the suggested proposals about special methods to delineate strictures (NBI and pCLE)
- We welcome the suggested proposals about FISH, DIA and lithotripsy-generator settings but we don't think to be appropriate as it does not represent the objective of "minireview"

**Reviewer #3**

- This is a minireview paper written according to guideline for manuscript preparation

Sincerely

Luca De Luca
