World Journal of Obstetrics and Gynecology,

Re: Article ID: 4331

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 4331 Revision-Why more attentions to fetus in ICP).

Title: Why more attentions to fetus in cases of intrahepatic cholestosis in pregnancy

Author: Xiu Quan Zhang, Yi Ling Ding, Li Juan Zhang

Name of Journal: *World Journal of Obstetrics and Gynecology*

ESPS Manuscript NO: 4331

The manuscript has been improved according to the suggestions of reviewers:

- 1. First, could you give me the word version document about your article? So that I can edit them easily.**

Format has been updated with Word Version Document for easy editing.

- 2. For manuscript submitted by non-native speakers of English, please provide language certificate by professional English language editing companies mentioned in "The revision polices of BPG for Editorial".**

The responding autor has been trained in programs in medical papers writing in English. He studied and worked in Universities in USA for many years (more than 13 years) with dozens of papers published in English without help from professional English language editing companies. In addition, this manuscript is reviewed and improved in English with the help from Christopher Leukel, who is native speaking of English working at University of Utah.

- 3. Please send your detail address, definite to the street number.**

The address was with street number was added:

Correspondence to: Xiu Quan Zhang, MD, PhD. University of Utah School of Medicine, Department of Obstetrics and Gynecology and Reproductive Genetics. 50 North Medical Drive, Salt Lake City, Utah 84132, USA. xiuquan.zhang@hsc.utah.edu

4. Core tips. Please write a summary of less than 100 words to outline the most innovative and important argument and core contents in your papers to attract readers.
Core tip added:
Core tip: Fetal outcomes for patients diagnosed with ICP can be devastating with serious complications. Advances in our understanding of the reasons that can cause severe fetal complications, such as sudden fetal death, slowed fetal lung maturity, perinatal nervous system injury, distress, and neonatal asphyxia, will provide some hints towards the basic etiology of this disorder. We look forward to a time that early diagnosis will be made and laboratory tests will be carried out to monitor these fetal conditions. I would suggest that more attention should be paid to the fetus which contributes to improve fetal outcomes.

5. **Please add PubMed citation numbers and DOI citation to the reference list and list all authors. Please revise throughout. The author should provide the first page of the paper without PMID and DOI.**
The DOI citation and PubMed citation numbers were provided and highlighted throughout the reference list.

6. In addition to the improvements according to the suggestions of the reviewers, we changed, corrected, and improved some parts of the paper, which are highlighted in the manuscripts.

Thank you very much for publishing our manuscript in the *World Journal of Obstetrics and Gynecology*.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Xiu Zhang'.
