SPECIFIC COMMENTS TO AUTHORS

This study is an interesting study. In this study, the authors established a model to measure and predict quality of gastrointestinal endoscopy. Data including endoscopy experience, equipment, facility, qualification of endoscopists, and other relevant metrics were collected and analyzed. The authors found that the length of experience in

endoscopy, weekly working hours, weekly night shifts, annual vacation days and job satisfaction were predictors for occurrence of medical malpractice and patient's disturbance, but the length of experience in endoscopy and ratio of endoscopists vs nurses were not adequate to establish an effective predictive model for complications of endoscopy. Overall, the study is well designed and the results are interesting. 1 the title reflects the main subject/hypothesis of the manuscript. 2 the abstract summarizes and reflect the work described in the manuscript. 3 the methods are described in detail. 4 the research objectives are achieved by the experiments used in this study. 5 the discussion is well display. Recent references are included. 6 the manuscript is well written. Some minor language revision is required.

SPECIFIC COMMENTS TO AUTHORS

Very interesting study about a model to measure and predict quality of gastrointestinal endoscopy in mainland China. The manuscript is very well written. The questionnaires in the survey are excellent. The results are important and will give the endoscopist a guideline for the clinical practice.
