the embryonic choroid complex which can originate hydrocephalus. The three cases are described with excellent illustrations resulting from magnetic resonance imaging. In the discussion, the authors give knowledge about VGAM. I think useful the description of these three cases. The manuscript is well written and cases are clearly exposed. I propose some minor improvements. Page 3, Case 1, line 3: "(...) and a magnetic resonance (...)" instead "(...) and an magnetic resonance(...)" Page 5, embryology and angioarchitecture, line 7: "located" instead "located" Page 6, Classification, line 6: fistulae instead fistulas For figures 1A and 1B: indicate with arrows the main characteristic to display: it would be useful for the non-specialist reader or the reader unfamiliar with X-ray imaging For figure 2 to 7: - give the magnification - give a more detailed caption for each subdivision of the figure (2A, 2B, ...) with possibly captions on the images: it would be useful for the non-specialist reader - indicate with an arrow the main structure to show.
