

## Answers to the reviewer's comments

(1) More detailed review should be in a variety of stem cells.

→As somatic stem cells capable of neuronal differentiation, retinal stem cells, placenta-derived mesenchymal stem cells, and peripheral blood monocytes were added. In addition, endoderm-derived stem cells were added.

(2) In order to make the article readable, author had better to reference pictures, more tables.

→ Two figures to make the readable were added.

(3) Reviewer suggests that the abstract section should be rewritten.

→The abstract was rewritten in more detail and appropriately. .
