Re: Manuscript No. 45085, MIH and PEIR in dentistry- diagnosis and treatment planning.

Dear sir,

Answers to reviewers comments:

On behalf of all authors, I would like to thank the reviewers for their very important comments. All the comments were taken into consideration and the manuscript was changed accordingly.

Reviewer no.1: "improve references and discussion section". Only six out of 44 references were published before 2000. These references are relevant historically to the first cases reported and the possible etiology of MIH and PEIR. The discussion section was rewritten.

Reviewer no.2: "It would be better to point out in the first sentence the meaning of the acronyms"- the full name of MIH and PEIR was added to the sentence. References and discussion: see the answer to the first reviewer.

Some phrases were rewritten in the abstract and introduction sections in order to minimize the similarity index of the manuscript.

Hope that the reviewed manuscript is acceptable for publication.

Kind regards,

Uri Zilberman- Head of the pediatric dental clinic

Barzilai Medical University Center, Ashkelon, Israel.
