**Malignant hepatic vascular tumors in adults: Characteristics, diagnostic difficulties and current management**

**Daniela Cornelia Lazăr, Mihaela Flavia Avram, Ioan Romosan, Violetta Văcariu, Adrian Goldis, Mărioara Cornianu**

### **Abstract**

Malignant vascular tumors of the liver include rare primary hepatic mesenchymal tumors developed in the background of a normal liver parenchyma. Most of them are detected incidentally by the increased use of performing imaging techniques.

### Match Overview

## Malignant vascular tumors of the liver: radiologic ...

<https://pubs.rsna.org/doi/abs/10.1148/radiographics.14.1.8128048>

Although benign **vascular tumors** of the **liver** are extremely common (hemangioma is the most common), **malignant vascular tumors** of the **liver** are very rare. In the **adult**, these **tumors** are angiosarcoma, epithelioid hemangioendothelioma, and Kaposi sarcoma. All **hepatic malignant vascular tumors** share histologic **characteristics**, grow around and into vessels, and are grossly multifocal.
