Systematic review with meta-analysis on transplantation for alcohol-related liver disease: Very low evidence of improved outcomes

Shen NT *et al.* Transplanting alcohol-related liver disease: A <sup>2</sup> meta-analysis

Nicole T Shen, Cristina Londono, Stephanie Gold, Ashley Wu, Keith C Mages, Robert S Brown Jr

## Abstract

### BACKGROUND

Alcohol-related liver disease (ALD) is a leading cause of liver failure and indication for liver transplantation that arises in the setting of alcohol use disorder (AUD). Previous reviews of transplantation for ALD are limited in scope of outcomes and type of ALD studied. A comprehensive systematic review could improve use of transplantation in ALD and improve future research. We hypothesize that while transplanting ALD may improve mortality and relapse, findings will be limited by pre-specified causes of heterogeneity - assessment and treatment of AUD, definition of ALD, spectrum of ALD studied, assessment and rates of relapse, and study quality and bias.

### AIM

To optimize liver transplantation for ALD, understanding existing research to guide
