SPECIFIC COMMENTS TO AUTHORS

This is an interesting study about the LOX and HIF1 α in gastric cancer. In this study, a total of 86 tissue and blood samples were collected from 140 patients. Single-factor analysis was applied to analyze the relationship between LOX, HIF1 α and prognosis of gastric cancer. The qRT-PCR analysis indicated that mRNA expression of LOX and

HIF1 α was upregulated in tumor tissues. Expression of LOX and HIF1 α increased with the number of lymph node metastases and later TNM stage. Single-factor analysis showed that high expression of LOX and HIF1 α led to poor prognosis of patients with gastric cancer. Overall, the study is well written and the results are very interesting. 1. The title is short and reflects the main subject of the manuscript. 2. The methods are described in detail. 3. The results are interesting and informative. The tables and figures are excellent. The authors should check the tables. There are two table 3? The second table 3 and table 4 should combined into one table. Please check the main text and make a revision. 4. The results are well discussed. Recent references are listed and discussed. 5. There are some minor language polishing which should be corrected.
