SPECIFIC COMMENTS TO AUTHORS

The current submitted article is an interesting case report. The following points are suggested for further consideration. 1. The title is suggest to be modified as "Premonitory urges located in the tongue for tic disorder : two case reports in children

and a literature review" so as to reflect the content of the article more adequately. 2. Nearly 70-90% patients with Tourette syndrome reported experiences of premonitory urges. As the reported two cases do not have Tourette syndrome, it is worthwhile to present how about the frequency for those who do not have Tourette syndrome? 3. The figure legends are too simple and containing the title only. It is necessary to describe the findings of these figures clearly to the readers.

SPECIFIC COMMENTS TO AUTHORS

According to my opinion, the paper is simple and clear both in the structure and in the written language. No modification is requested except for the elimination of both blood tests (in Chinese).

SPECIFIC COMMENTS TO AUTHORS

The word 'Tuorette syndrome' should be mentioned in the title. Similarly in the abstract section as well as in case report section, the authors should mention the word 'cases of Tuorette syndrome'. They should also justify the diagnoses of the syndrome by

enumerating various criteria being fulfilled by these two cases. The legend to figure 1 and 2 should mention, what the authors want to show or point out in the figure. The English language and grammatical mistakes need to be improved and corrected. The case reports seem to be suitable for publication with these modifications.

SPECIFIC COMMENTS TO AUTHORS

This paper has the purpose of present two cases of young patients with Premonitory urges located in their tongue, which is very rare and easily misdiagnosed in clinical work. The subject is interesting; however, but have some lack of information and the

paper has some concerns that need to be reviewed. Case 1 Please, add a clinical intraoral examination description and intraoral image of this case. Was the patient diagnosed as Tourette syndrome? Case 2 Please, add a clinical intraoral examination description of this case Was the patient diagnosed as Tourette syndrome? Discussion Is too short. There are lack of discussion about the cases, the different therapies used in which one and longer follow-up of this patients. It's important also discuss the others treatments modalities available.
