### Growing burden of alcoholic liver disease in China: A review

Wang WJ *et al.* Growing burden of ALD in China

Wen-Jun Wang, Peng Xiao, Hong-Qin Xu, Jun-Qi Niu, Yan-Hang Gao

#### Abstract

Explosive economic growth and increasing social openness in China over the last 30 years have significantly boosted alcohol consumption, and consequently, the incidence of alcoholic liver disease (ALD) in China has increased. Because the epidemiologic and clinical features of ALD in the Chinese population may differ from those of the Caucasian population, this review describes the epidemiology, pathogenesis, genetic polymorphisms, diagnosis and treatment of ALD in the Chinese population. This updated knowledge of ALD in China provides information needed for a global understanding of ALD and may help in the development of useful strategies for reducing the global ALD burden.

**Key words:** Alcoholic liver disease; Epidemiology; Morbidity; China
