Systematic review: Renin-angiotensin system inhibitors in chemoprevention of hepatocellular carcinoma

Barone M *et al.* RAS inhibitors for HCC

Michele Barone, Maria Teresa Viggiani, Giuseppe Losurdo, Mariabeatrice Principi, Alfredo Di Leo

Abstract

BACKGROUND

Neoangiogenesis is one of the key pathogenetic mechanisms in hepatocellular carcinoma (HCC). Modulation of the renin-angiotensin system (RAS) by angiotensin-converting enzyme inhibitors (ACE-Is) and angiotensin receptor blockers (ARBs) seems to be a possible adjuvant therapy for HCC, due to the anti-angiogenic and anti-fibrogenic activity of these drugs.

AIM

To elucidate the role of ARBs and ACE-Is in HCC.

METHODS

We performed an electronic search of the literature using the most accessed online databases (PubMed, Cochrane library, Scopus and Web of Science), entering the query
