### SPECIFIC COMMENTS TO AUTHORS

This article is an interesting case report that draws attention to a rare case. However, there is no differential diagnosis. In particular, such low-grade malignancies are confused with regenerative / reactive states. Differential diagnosis is also important

### SPECIFIC COMMENTS TO AUTHORS

The article entitled "Gastric adenocarcinoma of fundic gland type after Helicobacter pylori eradication: A case report" is an interesting, well written article reporting a case of gastric cancer that belong to a recently described histological subtype. There are many

**Telephone:** +1-925-223-8242  
**Fax:** +1-925-223-8243  
**E-mail:** bpgoffice@wjgnet.com  
**https://** www.wjgnet.com

cases reported from eastern countries but this histological subtype is rarely mentioned in western countries. Because of this, the detailed descriptions of the diagnostic procedure and the follow up, the possible relationship with *Helicobacter pylori* and the histological analysis are important. The introduction and the discussion are concise and precise, and the results are well described, making all the article easy for reading and understanding. I found interesting the clinical data and the histological analysis, but a description of the antibodies used and the immunohistochemical procedure is necessary.

### SPECIFIC COMMENTS TO AUTHORS

1 the number of cases reported in the literature should be mentioned (see Benedict et al )

2 In the introduction the sentence The tumor had invaded the submucosal layer is out of context  
3 Why an annual gastroscopy was done after Hp eradication ?  
4 In the reviewed

**Baishideng  
Publishing  
Group**

7041 Koll Center Parkway, Suite  
160, Pleasanton, CA 94566, USA  
**Telephone:** +1-925-223-8242  
**Fax:** +1-925-223-8243  
**E-mail:** bpgoffice@wjgnet.com  
**https://** www.wjgnet.com

by Benedict 40% of the cases were Hp positive. So the presence or not of Hp does not seem to be relevant. 5 What about the result of the endoscopies? Were FGP found in other sections of the stomach to support an association between them and GA-FG? 6 The authors should emphasize the differences between their case and the cases previously reported mainly the location (only 1% are found in the lower third) and the lack of the sequence PPI to FGP to GA-FG (the patient did not take PPI).

### SPECIFIC COMMENTS TO AUTHORS

The manuscript reports the case of gastric adenocarcinoma of fundic gland type (GA-FG) found in a 77-year old woman who has undergone previously two eradication therapies for Hp without the use of proton pump inhibitors. The case is quite

**Baishideng  
Publishing  
Group**
