We thank a lot his/her kind comments about our manuscript. In fact, we agree with this reviewer's comments concerning the utility of boarding the diagnosis and treatment of under-studied small bowel angiodysplasias in our review. As this reviewer pointed it out, this is the first time that an endoscopic classification of SBAD is proposed in order to stratify therapeutic measures.

We also think that an algorithm for treatment of angiodysplasias based on localization and severity of clinical manifestations may be very useful for readers in clinical practice.

We polished English language as the reviewer suggested.

##### Reviewer 02462322

We thank a lot the comments of reviewer regarding our work content.

As was suggested by this reviewer we added to our former manuscript, a table summarizing the pharmacologic treatments of angiodysplasias. Specially, prospective or controlled studies in order to increase clarity of the concepts.

We also polished English language as the reviewer suggested.
