Current surgical treatment of esophagogastric junction adenocarcinoma

Zhang S *et al.* Current surgical treatment of EGJ cancer

Shun Zhang, Hajime Orita, Tetsu Fukunaga

Abstract

The incidence of esophagogastric junction (EGJ) adenocarcinoma has shown an upward trend over the past several decades worldwide. In this article, we review previous studies and aimed to provide an update on the factors related to the surgical treatment of EGJ adenocarcinoma. The Siewert classification has implications for lymph node spread and is the most commonly used classification. Different types of EGJ cancer have different incidences of mediastinal and abdominal lymph node metastases, and different surgical approaches have unique advantages and disadvantages. Minimally invasive surgeries have been increasingly applied in clinical practice and show comparable oncologic outcomes. Endoscopic resection may be a good therapy

Silent killer: Adenocarcinoma at the esophagogastric junction

<https://www.americannursetoday.com/silent-killer-adenocarcinoma-at-the-esophagogastric...> ▾

EPIDEMIOLOGY

POSSIBLE CAUSES

TREATMENT APPROACHES

Esophageal cancer is three to four times more prevalent in men than women. Squamous-cell carcinoma is the most common esophageal cancer in African-American males, whereas adenocarcinoma is more common in white males. Esophageal cancer incidence is growing at an alarming rate. In the western world, AEG is the most rapidly increasing cancer. In white American males, its incidence is climbing faster than that of any other cancer. Since the mid-1970s, it has risen steadily by 5% to 10% per year. Ac...

OVERVIEW

SURGICAL MANAGEMENT

NEOADJUVANT AND PERIOP..

There were an estimated 29,590 new cases of carcinoma of the esophagus and stomach in 2013 and approximately 26,100 deaths, and gastric cancer is the second most common cancer worldwide. The purpose of this review is to update, present some of the new data on, and outline the controversies regarding neoadjuvant and adjuvant therapy of esophagogastric junction (EGJ) and gastric adenocarcinoma. It should be noted that many studies include squamous cell carcinomas of the esoph...

Adenocarcinoma of the Esophagogastric Junction

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1421149>

Adenocarcinoma of the esophagogastric junction was defined as a tumor whose center is within 5 cm proximal and distal of the anatomical cardia. 9–12 Patients with systemic metastases on preoperative staging or poor general status precluding an extensive surgical procedure were excluded.
