**SPECIFIC COMMENTS TO AUTHORS**

This is an interesting case of reemoval of pediatric stage IV neuroblastoma by robot-assisted laparoscopy. Robot-assisted laparoscopic surgery is a new method and is superior to conventional laparoscopic surgery. It has been preliminarily applied in

clinical practice with a significant curative effect. In this study, the authors reported a case with stage IV retroperitoneal neuroblastoma. The case is described in detail. The surgical procedure of the patient is very informative, and the figures are excellent. I only have some minor comments: 1. The abstract should be re-write. The references should be deleted from the abstract. And the background should moved or added to the main text "Introduction"2. What's the meaning of "MULTIDISCIPLINARY EXPERT CONSULTATION"? I suggest to delete this section. 3. The informed consent statement is not provided, only a title is listed. 4. References list can be updated. 5. Some minor language polishing should be revised.

**SPECIFIC COMMENTS TO AUTHORS**

Interesting report about the key surgical points of pediatric stage IV neuroblastoma performed completel by Da Vinci robotic system. The case is well introduced, and overall, the manuscript is well written. This case report will help the clinician taking

attention about the robot-assisted laparoscopy in the treatment of pediatric neuroblastoma. Comments: (1) It seems the informed consent statement is missing. Please provide it. (2) Some references is missing in the main text, such as “Zhu et al. from Tongji Hospital of Huazhong University of Science and Technology reported the application of a robotic surgical system in the surgical treatment of pediatric NB in 2017 in China” at the five section of the introduction, please provide the reference, and check the main text. (3) The manuscript requires an editing of English. Some minor language polishing should be corrected. (4) The reference is well discussed. However, it should be updated.
