2016年4月6日 - As endoscopic submucosal **dissection** (ESD) has been widely used for treatment of EGC, concerns have been asked to achieve curative resection for EGC while guaranteeing **precise** prediction of **lymph node** metastasis (LNM). Moreover, a new microscopic imaging for **precise** endoscopic diagnosis of EGC is introduced.

Lymph Node Dissection in Curative Gastrectomy for ...

www.ncbi.nlm.nih.gov › ... › *Int J Surg Oncol* › v.2011; 2011

Mediastinal Lymph Node Dissection for Gastric Cancer. Conventionally, this **mediastinal procedure** was done through the left **thoracoabdominal approach** (LTA), because the frequency of **lymph node metastasis** was reported to be high with about 20–40% and an adequate margin from the **tumor** ...

Discussion. For most solid **tumors**, en bloc removal of regional **lymph nodes** is part of the **surgical treatment**, although it is unclear whether this **procedure** improves survival or merely refines staging. 18 For **gastric cancer**, the JRS GC has consistently recommended extended (D2) **lymph-node dissection**.
