

Answer to reviewer 1: a. The pathologic evaluation of two cases were confirmed by two senior pathologists. b. Images have been organized in a PPT. c. Our manuscript has been polished by a native speaker and we have uploaded English Editing Certificate.

Answer to reviewer 2: Thanks!

Answer to reviewer 3: Owing to case 2 presents with large lesion and lymph node involvement, we thought open surgery is better than laparoscopy. The references have been cited in Table 1.

Answer to reviewer 4: It is a great pity that there is no record of intraoperative imaging, so we have no choice but to present the gross picture.
