

Answering Reviewers

Dear Editor at World Journal of Diabetes,

Thank you for the review of our manuscript. We kindly thank the reviewers for taking the time to comment on our manuscript and have carefully considered their comments. Below is our detailed response to the comments made by the reviewers:

- Reviewer 1 (02602042): Thank you for your thoughtful comments. Our article was designed in order to review the currently available literary data on diabetes mellitus and encephalopathy, with focus on the role of antidiabetic treatment. At this moment in time, there is scarce to no experimental data concerning type 1 diabetes mellitus, hence our focus on type 2 diabetes throughout the article. We have reviewed the text for typing and punctuation errors in order to further improve our manuscript.
- Reviewer 2 (03764245): Thank you for your thoughtful comments. We profoundly appreciate the time you took to read and evaluate our paper.

With kind regards,

Athanasia Papazafiropoulou, MD, MSc, PhD
