

To Subrata Ghosh and Andrzej S. Tarnawski
Editors-in-Chief, *World Journal of Gastroenterology*

Madrid, May 30, 2019

Dear Dr. Gosh and Dr. Tarnawski,

We would like to thank you again for the opportunity to send a revised version of our paper entitled **"Fluoroquinolones for the treatment of latent *Mycobacterium tuberculosis* infection in liver transplantation"** (46637.R1), to be newly considered for publication in *World Journal of Gastroenterology* as "Opinion Review". To better identify the modifications made in the paper, we have **yellow highlighted** them in the revised manuscript.

Please find below our detailed, point-by-point response to the issues raised by the reviewers.

• **Deputy Editor #1:** *Comments to the Author:*

There are no comments.

Response: We have accepted all of the editor's suggestions in the edited manuscript and added data that was missing the first version of our paper.

• **Reviewer #1:** *Comments to the Author:*

Authors made conclusions using 274 words, more than their abstract. It's supposed to be smaller to summarize the main. The data in some points are small and conflicting.

Response: Following the reviewer's comment, we have reduced the size of the conclusion to 184 words.

We hope that all these modifications will satisfy your requirements.

We truly appreciate the above listed critical comments and suggestions, that have greatly helped to enhance the overall quality of this paper.

Sincerely,

Jose Tiago Silva (corresponding author)
