SPECIFIC COMMENTS TO AUTHORS

Renzulli et al. analysed the imaging features of HCA using MRI with hepatospecific contrast agents, focusing on the limitations in the HCA characterization. The manuscript is well written. Future studies are needed to find an imaging diagnosis for almost all HCA types. Thank you for giving opportunity to review your manuscript.

SPECIFIC COMMENTS TO AUTHORS

The manuscript entitled "Hepatocellular Adenoma: An Unsolved Diagnostic Enigma" is well written. In this review study, the authors have provided a review on the imaging diagnosis of hepatocellular adenoma using MRI with hepatospecific contrast agents as a new possible classification approach. This study shows the importance of imaging
